INDLEDNING

Dette katalog er udarbejdet på baggrund af projektet Cirkulære Materialer under Lifestyle & Design Cluster, hvor aktører der producerer og udbyder metervarer med genanvendt fiberindhold er blevet mappet. En mindre survey hos udvalgte producenter er blevet gennemført, og udvalgte metervarer er testet i laboratoriet for at få en fornemmelse af metervarenes nuværende performance.

Tanken bag dette katalog er at give en oversigt over producenterne samt en sammenfatning af resultaterne af de gennemførte test.

METODE

I denne kortlægning har vi taget udgangspunkt i OEKO-TEX® Buying Guide for certificerede og testede produkter. Den er tilgængelig for alle via nedenstående link. Her kan man bl.a. finde metervarer som består helt eller delvist af recyclede materialer og som er farvede, trykte og/eller finish-behandlede klar til videre forarbejdning og som er certificeret i hht. kravene og med sporbarhed i hele kæden. I andre certificeringer som ex. BlueSign® testes også en del for indhold af restkemi på recyclede fibre og på færdige certificerede produkter, men der findes ingen database på færdigt stof. GRS, Global Recycled Standard, tester også noget på de recyclede fibermaterialer, men ikke på de færdige farvede og finish-behandlede metervarer og der findes ikke nogen samlet database.

SYMBOLFORKLARING

	Mekanisk recycling		OEKO-TEX® STANDARD 100		Organic Content Standard
	Termomekanisk recycling		OEKO-TEX® STeP		Regenerative Certified
	Kemisk recycling		Recycled Claim Standard		Global Recycled Standard
	Vævet kvalitet		Global Organic Textile Standard		Cradle to Cradle Certified
	Strikket kvalitet		BlueSign Certification		

TEKSTIL TIL TEKSTIL GENANVENDELSE

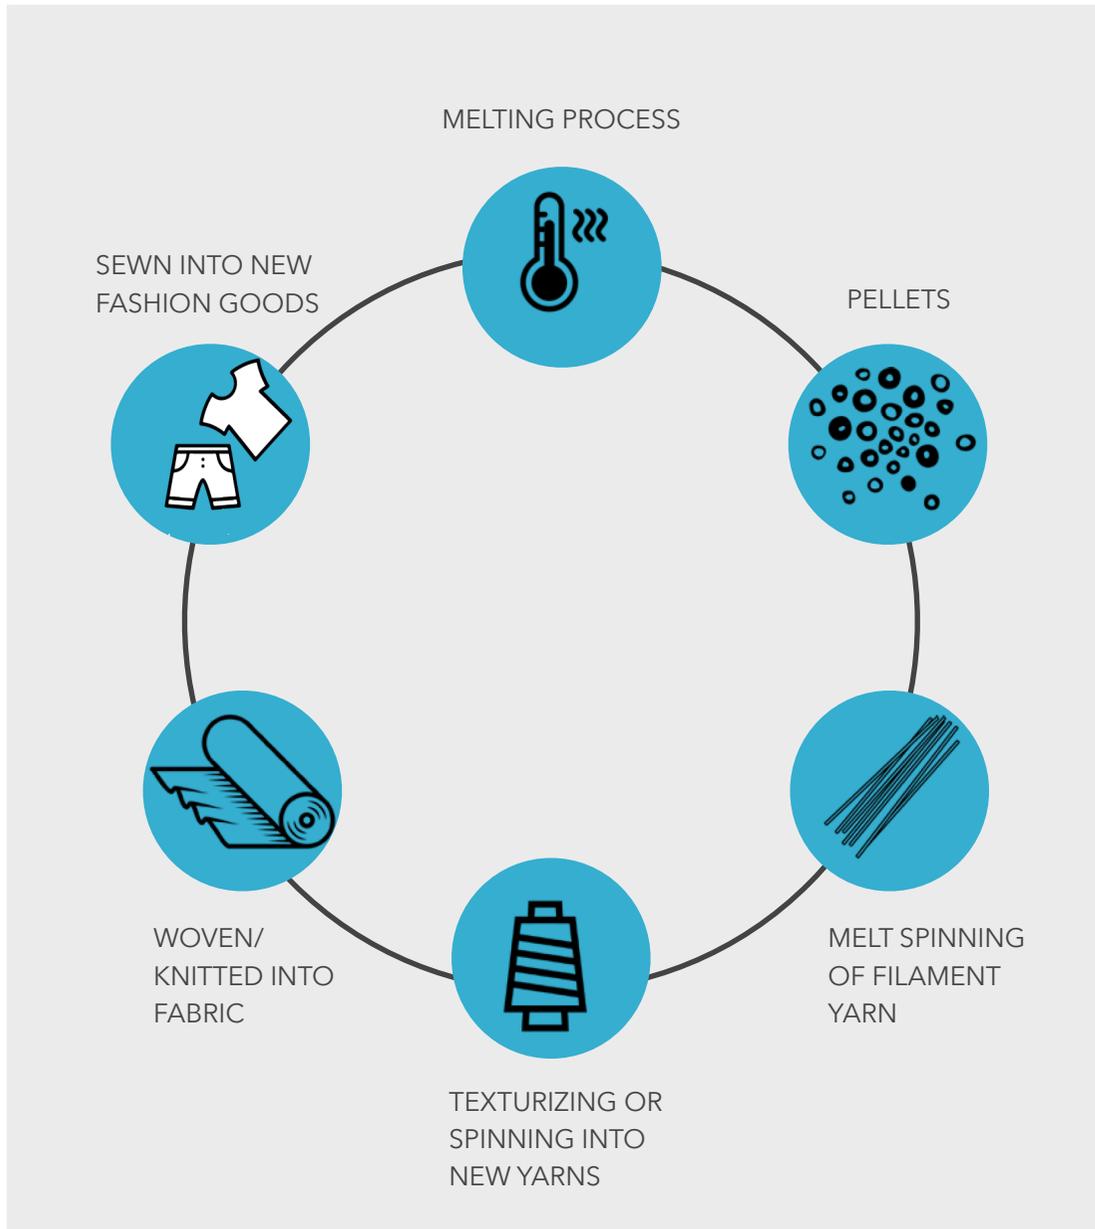

Tekstilaffald kan omdannes til nye tekstilfibre og garner gennem tre forskellige genanvendelsesteknologier; mekanisk, termomekanisk og kemisk genanvendelse. I øjeblikket er det hovedsageligt mekanisk og i mindre målestok termomekanisk genanvendelse der anvendes. Kemisk genanvendelse er stadig på pilotskala. Mekanisk genanvendelse involverer handlinger, der ned-deler, river og åbner tekstilerne, mens kemisk genanvendelse involverer processer, der de-polymeriserer tekstilaffald til kemiske monomerer eller polymerer, der kan bruges til produktion af nye fibre.

MEKANISK GENANVENDELSE

Mekanisk genanvendelse har været anvendt i en årrække til at omdanne tekstilaffald til ikke-vævede materialer (f.eks. isolerings-materialer til bygge- eller bilindustrien). Først inden for de seneste år er der udviklet teknologier, der kan genanvende tekstilaffald til fibre, der kan spindes til garner, og i første omgang baseret på postindustrielt tekstilaffald. Mekanisk genanvendte fibre har ikke samme egenskaber og kvalitet som virgin fibre, og kræver derfor at de blandes med nye fibre for at opnå en tilstrækkelig kvalitet.

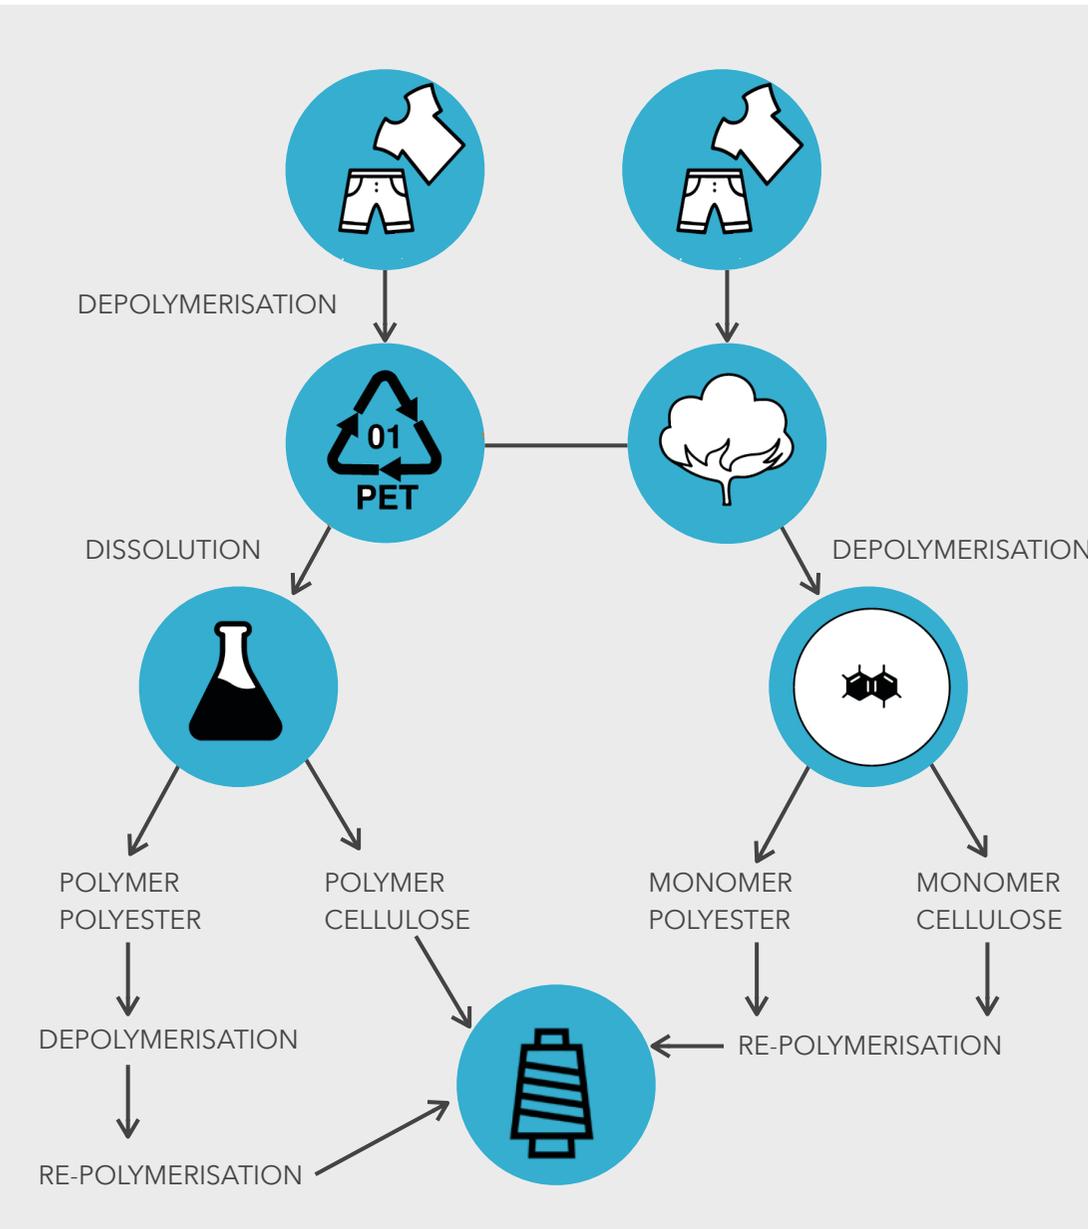

TERMOMEKANISK GENANVENDELSE

Termomekanisk genanvendelse har også været anvendt i en årrække. Størstedelen (<90%) af det polyesterstof med genanvendt materiale, som findes på markedet i dag, er dog lavet af polyesterfibre på basis af PET-plastikflasker, som er en forholdsvis enkel og frem for alt, billig genanvendelsesproces.

Fremadrettet varsles det dog af EU's tekstilstrategi, at PET-flasker fremover skal genbruges til flasker eller anden fødevareremballage, mens tekstilaffald, som også er en dyrebar ressource, skal laves til nye tekstiler. Det er nødvendigt med lovgivning på området for at få genanvendt den enorme mængde af kasserede tekstiler, hvoraf polyester udgør over 50%. Nogle certificerings-organer overvejer allerede nu at man ikke kan certificeres, hvis de genanvendte produkter er baseret på PET-flasker.

KEMISK GENANVENDELSE

Kemisk genanvendelse af tekstilaffald er stadig i sin begyndelse, og der er mange forskellige teknologier til kemisk genanvendelse. Der er efterhånden ved at dukke flere kommercielle faciliteter op til genanvendelse af tekstilaffald baseret på cellulose, som ex. bomuld der omdannes til viskose og Lyocell. Kemisk genanvendelse af polyester og polyester-blends er stadig i sin vorden, og der er kun nogle ganske få kommercielle aktører, mens mange innovatører arbejder på at udvikle teknologier, der både er teknisk og økonomisk skalerbare.

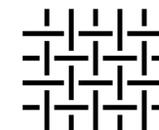

POLYESTER/COTTON BLENDS

There are three ways of chemical recycling; polyester and polyester/cotton blends:

1. Solvent-based dissolution
2. Hydrothermal
3. Enzymatic, also known as biochemical recycling.

TESTRESULTATER - VÆVEDE METERVARER

Mekanisk tekstil til tekstil genanvendelse, performance

Weight DS/EN 12127:1998

Average g/m2	Variation g/m2
250	235-270

Gennemsnitsværdier for 8 vævede metervarer med 24% til 80% post-consumer genanvendt CO/PES indhold.

Martindale abrasion resistance acc. To DS/EN ISO 12945-2:2020

Rubs	Variation rubs
38.000	31.000-43.000

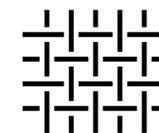

Testresultaterne er baseret på meget få test. Resultaterne understøtter dog andre test, der viser at metervarer med genanvendt indhold generelt kan opnå testresultater, der er sammenlignelige med metervarer baseret på nye materialer. Undtagelsen er dog pilling-tendensen, som generelt er noget højere på materialer med genanvendt indhold.

Tear strength ElmaTear DS/EN ISO 13937-1:2000

N	Variation N
55	40-90

TESTRESULTATER - VÆVEDE METERVARER

Mekanisk tekstil til tekstil genanvendelse, performance

Determination of fabric propensity to surface pilling Martindale method acc. to DS/EN ISO 12945-2:202

Revs	Pilling grade	Fuzzing grade	Matting grade
125	3-4	3	3-4
500	3	2-3	3-4
1000	2-3	2-3	3
2000	2	2	2-3

Gennemsnitsværdier for 8 vævede metervarer med 24% til 80% post-consumer genanvendt CO/PES indhold.

Colourfastness to washing acc. To DS/EN ISO 105-C06:2010

Staining at multi-fiber ISO 105-A03	
	Grade
Colur change ISO 105-A02	4-5

Grades from 1-5. 5 is best. Wash at 40°C

Colourfastness to rubbing DS/EN ISO 105-X12:2016

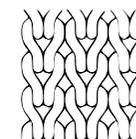

Colour change ISO 105-A02	Grade
Dry rubbing	4-5
Wet rubbing	3-4

Grades from 1-5. 5 is best.

Testresultaterne er baseret på meget få test. Resultaterne understøtter dog andre test, der viser at metervarer med genanvendt indhold generelt kan opnå testresultater, der er sammenlignelige med metervarer baseret på nye materialer. Undtagelsen er dog pilling-tendensen, som generelt er noget højere på materialer med genanvendt indhold.

TESTRESULTATER - STRIKKEDE METERVARER

Mekanisk tekstil til tekstil genanvendelse, performance

Weight DS/EN 12127:1998

Average g/m ²	Variation g/m ²
260	140-340

Gennemsnitsværdier for 8 strikkede metervarer med fra 30% post-consumer genanvendt CO eller CO/PES indhold.

Bursting strength acc. to. DS/EN ISO 13938-1:1999

kPa	Variation kPa
185	160-230

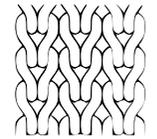

Testresultaterne er baseret på meget få test. Resultaterne understøtter dog andre test, der viser at metervarer med genanvendt indhold generelt kan opnå testresultater, der er sammenlignelige med metervarer baseret på nye materialer. Undtagelsen er dog pilling-tendensen, som generelt er noget højere på materialer med genanvendt indhold.

Determination of fabric propensity to surface pilling ICI method acc. to. DS/EN ISO 12945-1:2020

18.000	2-3	2-3	3

TESTRESULTATER - STRIKKEDE METERVARER

Mekanisk tekstil til tekstil genanvendelse, performance

Colourfastness to washing acc. To DS/EN ISO 105-C06:2010

Staining at multi-fiber ISO 105-A03	
	Grade
Colour change ISO 105-A02	4

Grades from 1-5. 5 is best. Wash at 40°C

Colourfastness to rubbing DS/EN ISO 105-X12:2016

Colour change ISO 105-A02	Grade
Dry rubbing	5
Wet rubbing	4-5

Grades from 1-5. 5 is best.

Gennemsnitsværdier for 8 strikkede metervarer med fra 30% post-consumer genanvendt CO eller CO/PES indhold.

Testresultaterne er baseret på meget få test. Resultaterne understøtter dog andre test, der viser at metervarer med genanvendt indhold generelt kan opnå testresultater, der er sammenlignelige med metervarer baseret på nye materialer. Undtagelsen er dog pilling-tendensen, som generelt er noget højere på materialer med genanvendt indhold.

LEVERANDØR SURVEY

Dataindsamling og metode

På de følgende sider fremgår resultaterne af den frivillige survey, som vi har foretaget i forbindelse med projektet. Virksomhederne har besvaret 18 spørgsmål vedrørende deres brug af genanvendt materiale, kvaliteten af de metervarer, som de producerer samt deres forventede vækst på markedet (forecast 2025 og 2030).

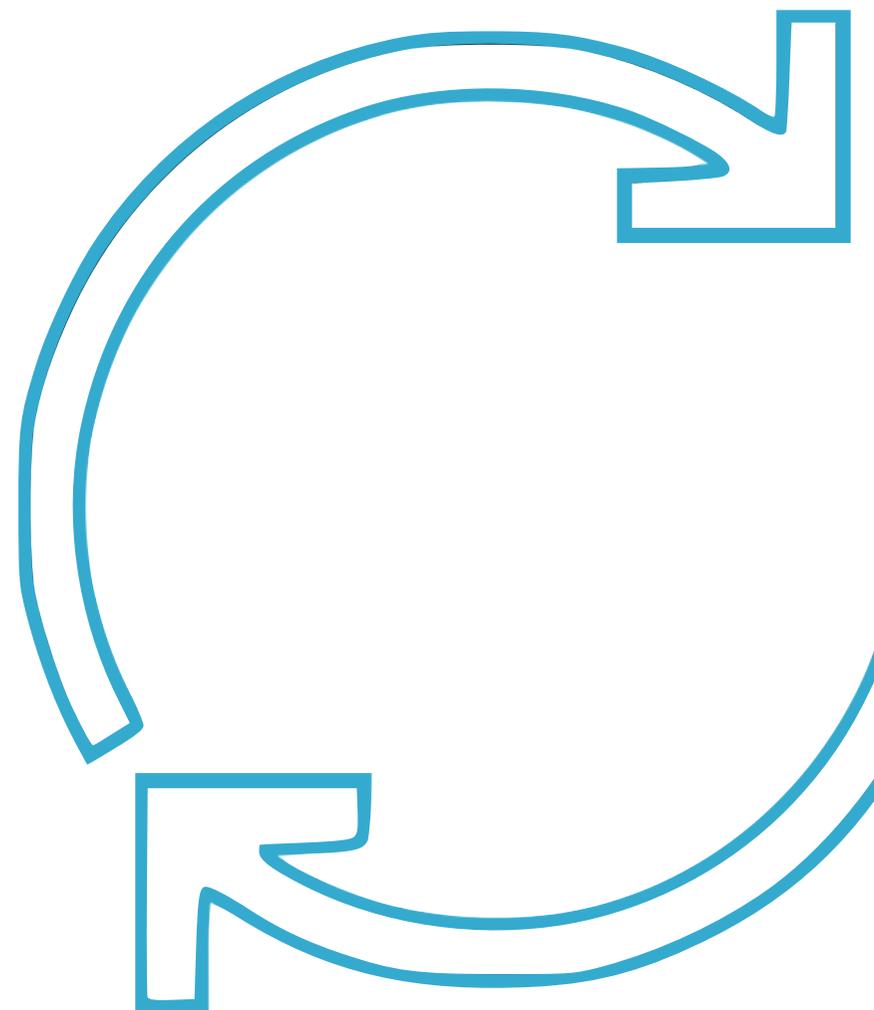

Resultatet er 14 survey besvarelser for Q3 2024.

Herefter følger et katalog over 321 leverandører i hele verden. Listen tager afsæt i OEKO-TEX® Buying Guide for certificerede og testede produkter og giver et udførligt overblik over hvilke typer kvaliteter de respektive leverandører producerer.

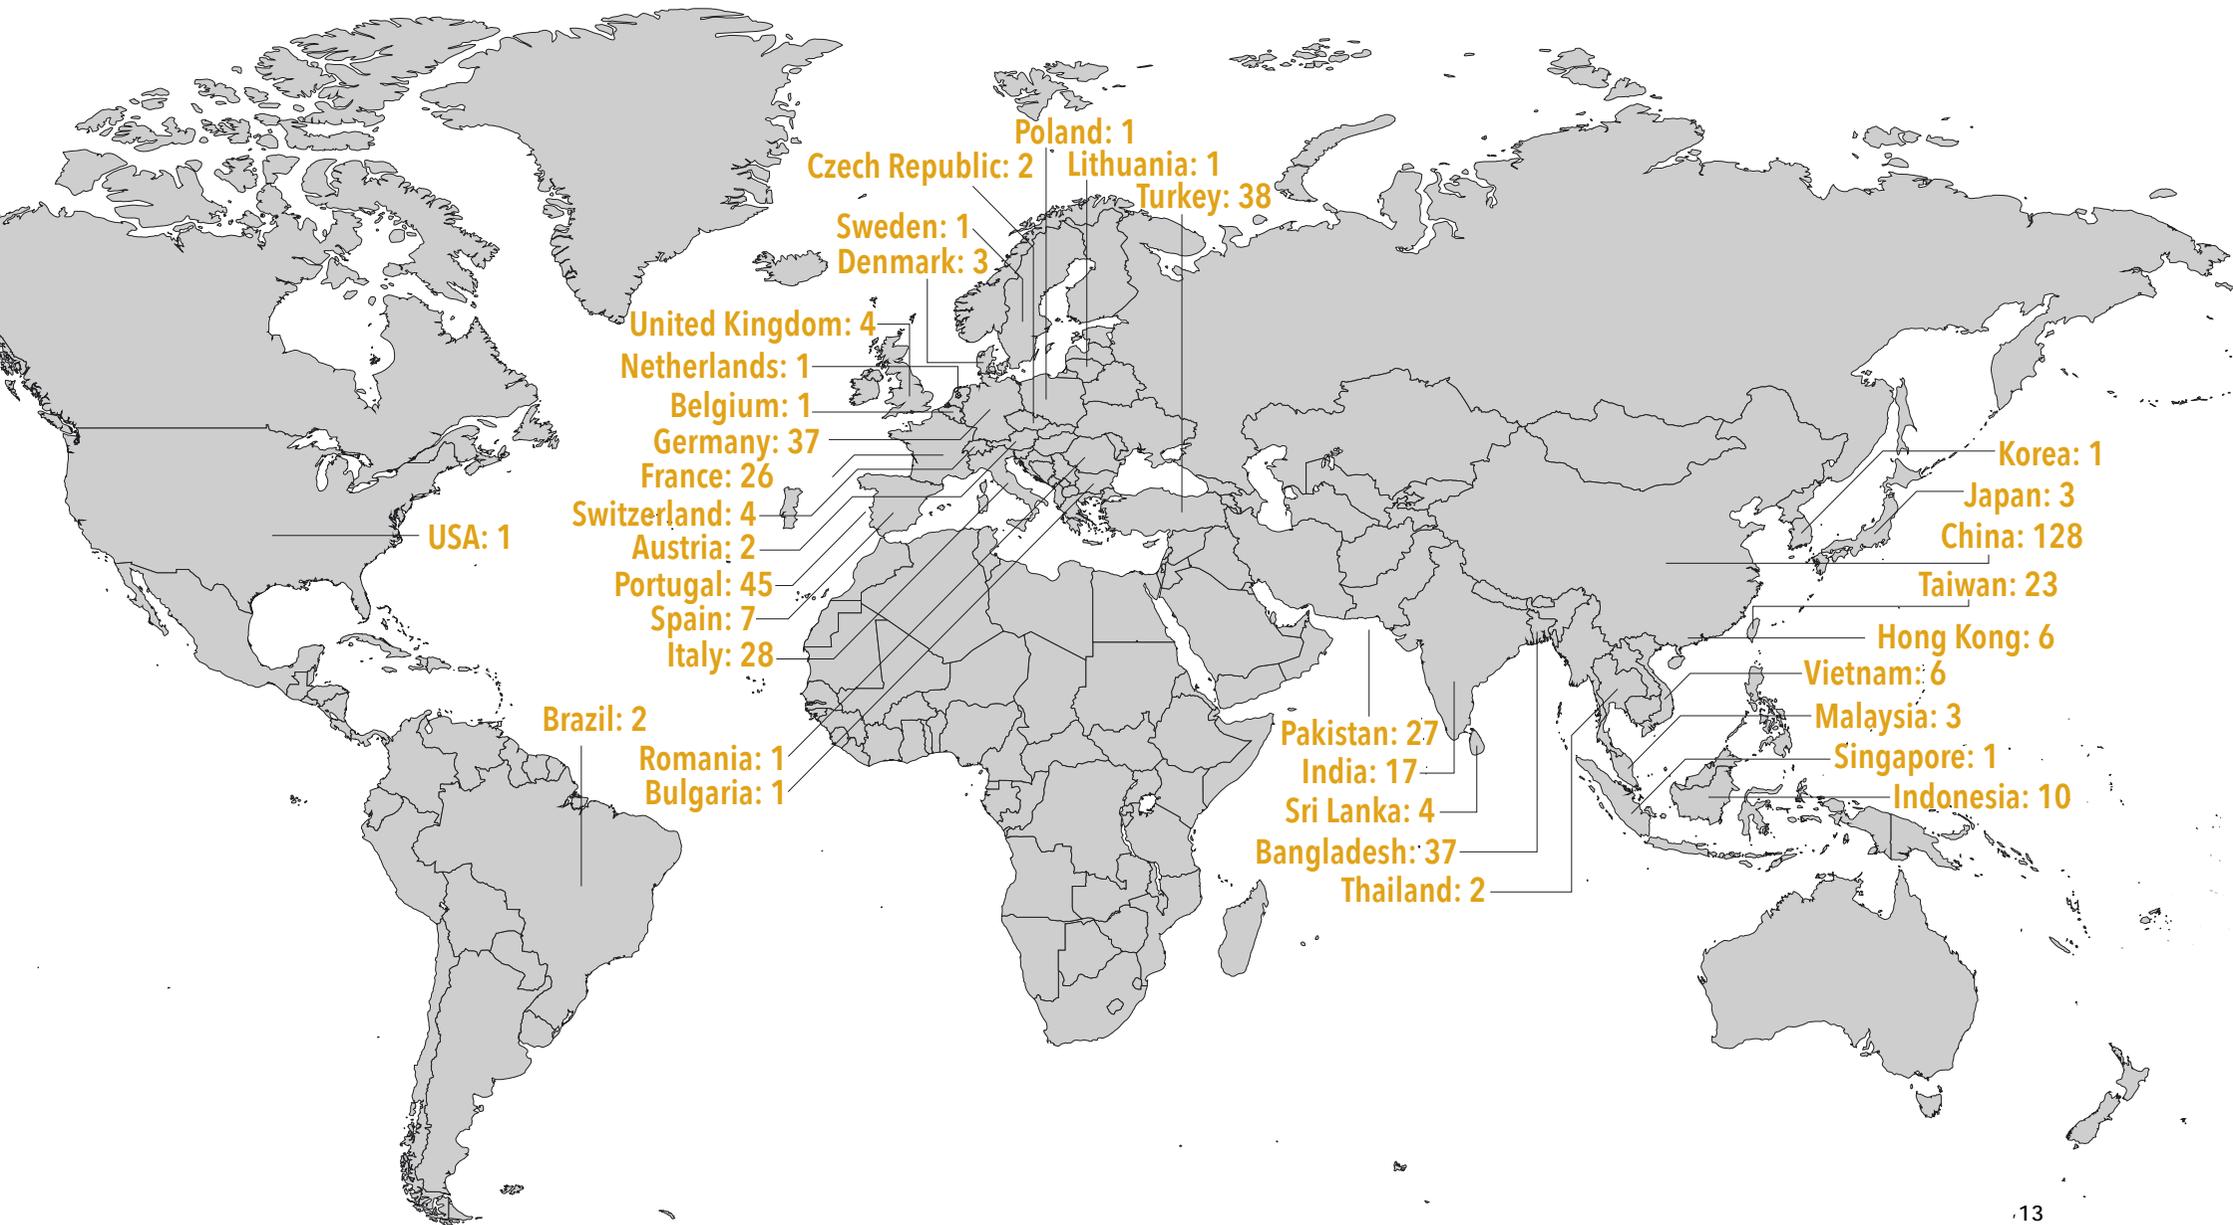

Indsamling af data:

Genanvendt materiale - OEKO-TEX STANDARD 100 certificerede tekstile produkter og rapport for fiber-til-fiber genanvendelse.

Contact: band@hackenberg-group.de

FABRIC TYPE

Finished fabrics: Knitted & Woven. Woven tapes customised according to customer requirements

Fabric type: Single jersey, Flat knit, Circular knit. Plain, twill, Jacquard

Type of recycled materiales: Natural cellulosic fibres, synthetic fibres, natural animal/protein fiber, regenerated fiber

TECHNOLOGY

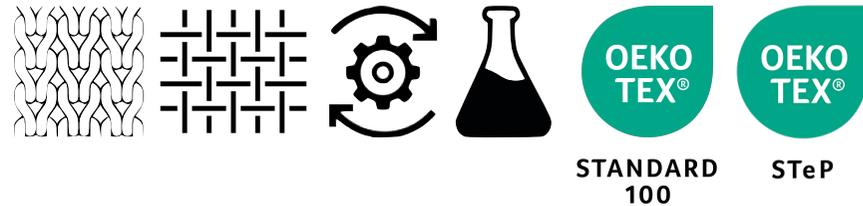

Technology: Mechanical & Chemical recycling

Mechanically recycling, spinning method:

According to customer requirements

Chemically recycling, spinning method:

According to customer requirements

MATERIAL COMPOSITION & TOLERANCES

Percentages of material composition that can be recycled content: 75-100%

Ability to deliver the same quality from batch to batch: Yes

Tolerances regarding colors from batch to batch: Minimalle

PRODUCTION CAPACITY & CERTIFICATIONS

Quantity of fabric with recycled content produced pr year: -

Expected quantity for 2025: -

Expected quantity for 2030: -

Certifications for recycled products: OEKO-TEX STANDARD 100, OEKO-Step

Company: Engtex
Country: Sweden
Web: <https://engtex.com/>
Contact: info@engtex.se

FABRIC TYPE

Finished fabrics: Knitted, mainly to personal protection equipment

Fabric type: Warp knitted and weft insertion warp knit

Type of recycled materiales: Synthetic fibres

TECHNOLOGY

Technology: Mechanical recycling

Mechanically recycling, spinning method:
Extrusion

Chemically recycling, spinning method:
-

MATERIAL COMPOSITION & TOLERANCES

Percentages of material composition that can be recycled content: 75-100%

Ability to deliver the same quality from batch to batch: Yes

Tolerances regarding colors from batch to batch:

PRODUCTION CAPACITY & CERTIFICATIONS

Quantity of fabric with recycled content produced pr year:
approx. 200.000 m/year

Expected quantity for 2025: 225.000 m/year

Expected quantity for 2030: 250.000 m/year

Certifications for recycled products: GRS, OEKO-TEX STANDARD 100. Wash fastness specification & yarn specifications.

FIDIVI*

Company: Fidivi

Country: Italy

Web: <https://www.fidivi.com/en/>

Contact: info@fidivi.com

FABRIC TYPE

Finished fabrics: Woven. Technical fabrics for office (not fashion and brands). B2B.

Fabric type: Plain, Jacquard

Type of recycled materiales: Natural cellulosic fibres, Synthetic fibres

TECHNOLOGY

Technology: Thermal recycling, polyester yarn from post-consumer PET-bottles

Mechanically recycling, spinning method:
Air Jet or other spinning method

Chemically recycling, spinning method: -

MATERIAL COMPOSITION & TOLERANCES

Percentages of material composition that can be recycled content: 75-100%

Ability to deliver the same quality from batch to batch: Yes

Tolerances regarding colors from batch to batch:
Delta E <0.5

PRODUCTION CAPACITY & CERTIFICATIONS

Quantity of fabric with recycled content produced pr year:
100.000 meters in 2023

Expected quantity for 2025: 150.000

Expected quantity for 2030: -

Certifications for recycled products: GRS, OEKO-TEX STANDARD 100. Martindale specification.

Company: Fischer Group

Country: Denmark

Web: <https://www.fischergroup.dk/>

Contact: fischer@fischer-international.dk

FABRIC TYPE

Finished fabrics: Woven

Fabric type: Plain

Type of recycled materiales: Natural cellulosic fibres, Synthetic fibres, Natural animal/protein fiber

TECHNOLOGY

Technology: Mechanical & Chemical recycling

Mechanically recycling, spinning method:

Ring spinning

Chemically recycling, spinning method:

Ring spinning

MATERIAL COMPOSITION & TOLERANCES

Percentages of material composition that can be recycled content: 50-75%, 75-100%

Ability to deliver the same quality from batch to batch: Yes

Tolerances regarding colors from batch to batch:
Evaluated for each batch

PRODUCTION CAPACITY & CERTIFICATIONS

Quantity of fabric with recycled content produced pr year:
30.000 m/year, 3m width ~ 15 tons

Expected quantity for 2025: 35.000

Expected quantity for 2030: 50.000

Certifications for recycled products: GRS, OEKO-TEX STANDARD 100. Wash fastness specification.
